

As seen in the November 2002 issue of Whatlaptop magazine

FLASH IN THE PAD

If you feel limited by your digital camera's memory, you may want to find an alternative place to store your images when you're out and about. Delkin Devices' eFilm PicturePAD is a portable hard drive designed specifically for storing digital images. A coloured LCD screen allows you to review your pictures, and there is the option to connect to a PC or television. Images are downloaded onto the PicturePAD by inserting a CompactFlash card, and memory card adapters are available for SmartMedia, MultiMedia/Secure Digital and Memory Stick. The PicturePAD is available to buy on Delkin's website for \$549.
